The Characters of the xii. signes, vii. Planets, their Aspects, with the Dragons head and taile, be thus figured or marked.

Num	Names.	Caract.	Qualities.	
1	Aries	♈	hot and drie	Mouable, masc. diurnal
2	Taurus	♉	cold and dry	Fixed, femi. Nocturnal
3	Gemini	♊	hot & moyst	Common masc. diurnal
4	Cancer.	♋	cold & moist	mouable fem. nocturnal
5	Leo	♌	hot and drie	Fixed masculi. diurnall
6	Virgo	♍	cold and dri	Com. femin. nocturnall
7	Libra	♎	hot & moyst	Mouable masc. diurnal
8	Scorpio	♏	cold & moyst	Fixed, fem. nocturnall
9	Sagitar.	♐	hot and drie	Com masculi. diurnall
10	Capric.	♑	cold and dri	mouable fem. nocturnal
11	Aquar.	♒	hot & moyst	Fixed. masculi. diurnall
12	Pisces.	♓	cold & moist	Com. femin. nocturnall

Seuen Planets	
1. Saturne	♄
2. Iupiter	♃
3. Mars	♂
4. Sol	☉
5. Venus	♀
6. Mercurie	☿
7. Luna.	☽

The Dragons head, ☊
And Dragons taile. ☋
☊ Dragons head, and is good with good.
☋ Dragons tayle, and is euill with good.

☌ Coniunction, ✶ Sextile.
□ Quadrate, ☍ Oppositon,
And △ Trine.

The parts of mans body, which the Planets doe signifie of themselues.

Saturnus	Iupiter.	Mars.	Sol
Spleene, Right Eare, Bladder, and Bones.	Lungs, Ribs Liuer, Gristles, Hæde, Arteries.	Gall, reynes, Left eare, Veines, and Stones.	Sight, Heart, right side, marrow, Sinnewes, right eye viri ♂ et ♀.
Venus	Mercurius	Luna.	
Kidneies, sperme, fatnesse, buttockes, genitals, matrixe, pappes, and throate.	Memory, Tongue, Hands, phantasie, Mouth, Sinewes, And shankes	Left eye viri, right mulieris, stomacke, Left side, Brest, womb-port, and Taste.	The secrets of both sex.

The fiue Aspects of the Planets, with their Characters, and the definition of them.

1. The Coniunction is, when two plannets are both in one selfe-signe, and one selfe-degree: which Aspect in Greeke is called Synodos, and is marked thus ☌.

2 The Sextile Aspect, is, when two planets are distant one from another, betweene the centures of their own bodies, by a sixt part of the Zodiake: that is to say, by two whole signes, or 60. degrees, which Aspect is cald in Greek Exagonos, and is marked thus ✶.

3. The Quadrile Aspect, is when two plannets are distant the one from the other three whole signes, or 90 Degrees of the Zodiake: and is called in Greeke Tetragonos, and is marked thus □.

4. The Trine Aspect, is when two plannets are distant the one from the other by foure whole signes, or 120. degrees of the Zodiake, and is called in Greeke Trigonos, / is marked thus △.

5. The Oppositition, is when two planets are right opposite the one to the other, and are distant the one from the other by six whole signs, or 180. degrees of the Zodiake, and is called in Greeke Diametros, marked thus ☍

The Anathomy of mans body, as the parts are Heathenishly attributed to the 12. signes of the Zodiaque.

Aries, **the Head and Face.**

Taurus, **Necke and Throate.**

Cancer, **Brest, Stomache, and Ribs.**

Virgo, **Bowels and Belly.**

Scorpio, **Secrets**

Capricornus **The Knees.**

Gemini, **Armes and Shoulders.**

Leo, **Hart & backe**

Libra, **Reines and Loynes**

Sagitarius **Thighes.**

Aquarius **The Legges**

Pisces **The Face.**

In the 7. or last Columne of this my Almanacke toward the right hand, you haue the houre & minute of the Sun-rising for euery day in the yeare, Pſ. 104, 22. which hours and min. are halfe the length of the same night. For example: the 8. of Jan. the Sun riseth at 8. of the clocke. which being doubled, maketh 16. houres and no min. the length of that night. And to know the time of the Sun-setting through the yeare, take the houres and minutes found in the Almanacke for sun-rising, from 12. and you shal haue the Sun setting left: which being doubled, is the length of the day. Example: January the 8. day aforenamed, the sun riseth at 8. and no minutes: take 8. from 12. and there resteth 4. the houre of sunne set that day: 4. being doubled, maketh 8. houres, the length of that day, and so of all the rest. This is very easie.

The dayes of the moneth.	Weeke dayes.	Festiual dayes in vse for Law daies, keeping of Fayres, &c.	The place the ☉ is in the Zodiak euerie day at noone.	The Aspects of the Moon, with the Planets, or void of course, fitt for Physitians & others.	Ful Sea at London bridge	The houre & min. of Sun-rising

A PROGNOSTICATION for this present yeare of Grace, 1622.

A subiect, well meriting the probation of *the Iudicious, who best know how to con*firme their knowledge: contayning a declara*tion of the foure quarters of the yeare*, Astronomicall Calculations, also notes both *Phisicall* and *Ciuill*, whereunto is annexed a compendious Table, to know the *Crisis* of any man that falleth sick.

The like whereof for varietie of Discourse, mixed with profit, and modest delight, *hath not heretofore been published.*

By RICHARD ALLESTREE, Contemplator *in* Siderali Scientia, *and louer of Truth.*

Residens super æthere, cuncta Rex Deus gubernat.

Euphemiſmus, or boni ominis captatio. Aſtronomicall Calculations for this preſent yeere 1622.

THe true or apparant greatneſſe of the Tropicall yeere, is 365. dayes, 5. houres, ſcrup: 55. 35. ſeconds 18. thirds.

And in this time the Sun doth finiſh his courſe through the 12. ſignes of the Zodiaque: and this Tropicall yeare, beginneth when the Sun entereth into the firſt ſcruple of the Dodecatemory of the Imaginary Signe Aries.

A day large or naturall, is 24. houres long, and a day ſtrict or ciuill, is 12. hours long, beginning at Sun riſing on our Horizon, and ending when the Sun is gone off. The Hebrews reckon the naturall day from euening to euening: the Romanes from midnight, the Athenians begin at Sun-ſet, the Babilonians at Sun-riſing, the Vmbrians and Aſtronomers at midday.

Looke for the Auge or abſis ſumma, of all the ſeuen Planets, in my Prognoſtication 1620. ſet downe after Copernicus: and you haue both the Auge and the oppoſite Auge, vacuus curſus, and the time of the Moone, being *Sauage*, noted with the afore ſayd words (Apog. Vac: curſ, *Sauage*) in euerie monthly in this Almanacke for this yeare: and theſe paſſions or rather debilities Accidentall of the Moone, be of great value if there be truth in Aſtrology: alſo, you haue the aſpect of the Planets with the Moone, as they fall for euery day in the moneth.

The true proceſſion of the Aequinoctial, is 28. grades 27 minuts. 41 ſec. 42. thirds. 4 fourths.

The greateſt obliquitie of the Zodiaque, accordinge

to Reinholdus, is 23. Degrees. 28. minu. 1 Sec. 12 thirds.

The excentricitie of the Sun, is 32201. such as the semidiameter of the excentricie of the Sun is 1000000 small parts. Eclipses 1622.

There suffereth this yeere truly no losse or Eclipse of light, in the great lights of heauen, that is of Adad or the Sun, nor Noctiluca, or the Moon in our Horizon: and in other places of the earth, the Moone will in no place be manifestly darkened, but the Sun will be perceiued to be Eclipsed in other lands, by two interpositions of the Moone and the earth.

The first great Eclipse of the Sun will be seene the 30. day of Aprill in the Iulian or English yeere, but the 10. day of May, in the Lilian or Roman yeere: it will be seene in the vttermost Occidentall parts of Affrike, which is placed betweene the Aequator & the Tropike of Cancer, in the head of the greene Ilands of S. Luke, Nicholas and Anthony.

The 2. great and fearefull Eclipse of the Sun will be seene the 3. day of Nouember in the Lilian or Roman yeere: but the 24. day of October, in the Iulian or English yeere, in the extreame Orientall parts of India, which doth containe Calleeut, Narsinger, Chersoneso, Malaccense and the adiacent kingdomes.

Saturne is Retrograde from the first of Ianuarie to the 7. day of March; and from the first of Nouemb. to the end of the yeere, all the rest of the yeere Direct.

Iupiter is Retrograde from the beginning of the yeere to the 31. of Ianuary: and from the 5. day of Nouember to the end of the yeere; all the ends else Direct. Mars thorough this whole yeere is free from retrogradation.

Venus is Direct from the beginning of this yeare vnto the 5. day of Aprill: and from the 20. of May vnto the end of the yeere; all the rest retrograde.

Mercury is direct from the 3 day of Ianuary to the 6. day of Aprill; and from the 28. of Aprill to the first of August, and from the 24. of August to the 24. of Nouember and all the rest of the yeere retrograde.

There is a coniunction of Saturne and Mars the 10. of July. And a coniunctiou of ♃ and ☽, the 10. day of Iune at 8 a clock at night, in Cancer a signe of the watery

waterie Triplicitie: haec sunt prodromi (as the Philosophers saith) vt erunt terræ motus & damnum in mari & aqua.

The Church of England, of an ancient custome beginneth the yeare the 25. day of March. One degree of Latitude in the skie, doth answer to 60. miles on earth throngh all England.

The Latitude of the Pole at Wardhouse is 71. degres, the longest day, is from the 6 day of May til the 19 day of July. so that it is continuall day with them by the space of 74. dayes.

Under the Poles of the world, it is halfe a yeere continuall day, and the other halfe yeere continuall night. because of so long the Sun is not seene aboue that Horizon.

In Groineland, the Sun setteth not in 2400 houres

The difference of the length of the day in these 3 places.

			Houres		Minutes.	
At	London	The	16	and	26	Long.
	Derby	Longest	16		44	
	Poike	Day is	16		58	

The Circumference of the whole earth is in degrees 360 in Italian miles 21600. or 7200. Leagues: a league is 3. miles English. the diameter of the earth is 6872. $\frac{8}{11}$ Italian miles. 1718. $\frac{2}{11}$ German, 1374 $\frac{5}{11}$ Sueuians.

Anathomy of wonder great I speake, and yet am dead: men sucke sweete iuice from these blacke veines. which mother wisedome bred.

A Description of the foure Quarters of this yeare. 1622.

Temporibus veris modicum prandere iuberis,
Sed calor æstatis dapibus nocet immoderatis,
Autumni fructus caueas ne sint tibi luctus,
De mensa tume quantum vis tempore brumæ.

THe Hyemall Solsticiall, or winter quarter Astronomicall, entred the last yeare 1621. the 11 day of December late in the afternoone; (more naturally about the midst of November) at what time the Sun entred into the first minute of the imaginary signe Capricorne, being then declined from the Aequinoctiall, according to the observation of Tycho de Brache 23 degrees 31 minutes, 30 seconds to the southwards, at which time the dayes be at the shortest: in this time raines and moystures doe increase, then meates and drinkes naturally would be used very hot with moderation; also to drink moderately wins without allay.

The Spring Quarter.

THe tenth day of March a little after noone, beginneth our Aequinoctium vernum, at which time the dayes & nights are of equall length throughout the whole world (but our Spring time more naturally and truely beginneth the 8 or 9 day of February) sweat, fleagme, and blood doe increase: Exercise the body diligently. Gallen in Com. Aph. 18. Lib. 1. saith, meate would be taken lesse in quantity now then in winter, and drinke somewhat more, yet alwayes provided, drinke moderately.

Summer Quarter.

SUmmer, according to the rules of Astronomy, taketh his beginning this yeare the 11 day of June, late in the afternoone (or more naturally with vs here in this Northerne 8 Climate, in mid May) at what time, the declining Sun is mounted to the highest point of his ascendent, or neerest to our Zenith, or Verticall point, producing the dayes here with vs vnto the longest, and nights to the shortest: having his ingresse into the first minute of the imaginary signe Cancer. This quarter the inward heate of the body is but little, and the stomacke doth not digest so strongly,

strongly, not quickly as in winter: wherefore in this season eating often, and a little at once, is most conuenient.

Autumne or Harueſt Quarter.

OCulus mundi, Titan, the eye of the world, or the Sun, coming to the Autumnall Aequinoctiall point, or firſt minute of the imaginary ſigne Libra, beginning our ſecond ſpring or Autumne quarter, making againe the daies & nights of equall length, beginneth according to Aſtronomy, the 13. day of September, a little before noone (or more naturally, about the midſt of Auguſt) this ſeaſon of the yeare by nature is variable, and the ayre changeable, by occaſion wherof, commeth ſundry ſickneſſes, blood decreaſeth, & melancholy aboundeth: wherefore all ſummer fruites would then be eſchewed, for as much as they make ill iuice or blood, and winds in the body.

Of the foure humors, and certaine Phyſicall Obſeruations.

Quatuor humores in humano corpore conſtãt,
Sanguis cum cholera flegma, melancholiaque,
Terra melan, aqua fleg & aer ſanguis,
choler igni.

WHich if they exceed or alter that proportion that God ordained them to at the firſt (either in quality or quantity) then ſhortly happeneth diſeaſes and ſickneſſe. Now for Phlebotomy and purging, when the weather is extreame hot, or cold, it is not good, vnleſſe that ſome great neceſſity doe require it. And therefore Hippocrat part 6. & 46. Aphoriſ. ſaith, That the Spring and Autumne are more conuenient to take Phyſicke in, then Summer and Winter. And for age, about 40 or vnder 56

yeares, or elle not. (And againe, to sing the old tune) I say there is some smattering Phylitions, with others more precise then wise, that say, No part of mans body ought to be touched with any Chirurgicall Instrument, or Cautery, actuall or potentiall, at what time the Astronomer or Heathenish Prognosticators, heauen-gazers and Moone-prophets saith, the sun, moon, Almuten, and Lord of the Ascendent, bee in the same imaginary signe, heathenishly attributed to that part of mans body, set downe by them in the Almanacke (and chiefely for sooth, if such Planets in the Radix of the nativity had any dominion in the 6. 8. or 12. houle) & in so doing the sicke patient may dy for want of opening a veine. & so the curious & superstitious phylition being admonished, may be a manslayer. The reason is, for that the moone abideth two dayes and more in one signe, & the Sun 30 dayes. In the first & third weekes of the moone, it is best vsing externall Euacuations, as Phlebotomy, Bathes, Cupping, &c. But in the second & fourth weekes of the moone, internall Euacuations, because the very spirit & life resteth in the blood for that is the chiefest humor in mans body: for in Venis sanguis est fundamentum caloris naturalis, in quo calor naturalis confortatur. Therefore it ought not to be let out, but vpon great occasion and sound aduice of some learned Phylitian, for otherwise it may make a way to many grieuous infirmities. And concerning letting of blood (I say againe) if it bee for the Pestilence, Pleurisie, Esquinancy, for a continuall burning Ague, a continuall or great head-ach proceeding of choler, or superfluous blood: or for any extreame paine caused by heate, choler, or superfluity of blood: A man (in any of al these cases) may not tarry for a chosen day of the Almanacke, because the patient may die in the meane space: but incontinently with all speed, he must be let blood, vnlesse he be very weake, & like to swoune. In letting of blood there be many things to be weighed and considered: therefore I would not wish that any man should trust too much to the vnlearned Chirurgion: and withall here would generally be noted, that it is not conuenient either for a very leane and

weake

weake man, or for a very fat and grosse man to bee let blood. There remaineth many mo consideratiõs, but this little volume will not containe them: and so I conclude this point with the ancient commendation of Phlebotomie:

Blood letting cheereth sad minds, and anger pacifies,
And preserueth loue from braine-sicke fantasies.

Hippocrates defineth Physicke to be a putting to, or a taking away of such things as are wãting, or abounding in mans body: The former hereof, standeth in dieting of the body, the other in disburdening the same of corrupt and superfluous humors, which is best effected by blood-letting, and purging: the best times for doing whereof (according to rules of Astronomy) are here briefly noted. The Characters heere following, you shall finde written on the 3. leafe of my Almanack. In taking purgations, let the motion of the moone be in watry signes, as in ♋, ♏, ♓ ♌: and take heed also that the Moone be not in ♈, ♉, ♎, or ♑, or ioyned to any retrograde planet (in giuing purging medicines) for they cause vomit, as saith Hermes in his 74. proposition: neither aspected of ♄, for he by thickning and making grosse the humors, and shutting vp the pores, hindereth (if the Lord will) the effect of the Physicke; nor ♃, for he though his heate and dryneste oftentimes sharpneth the humors to the drawing forth of blood, if the medicine be strong.

5. things to be obserued in purging.

1. The humour abounding.
2. The best way to auoyde it.
3. The strength of the patient.
4. The manner of the disease.
5. The strength and nature of the medicine to be ministred.

Purge with

Pils the ☽ in ♓, in ☌, ✶, or △, inter ☿ ☍ ♅.
Electuaries ☽ in ♋, in a ☌. ✶, or △ ☿ ☍ ♅.
Potions ☽ in ♋, ♏, ♓. in a ☌, ✶, △, ☿ ☍ ♅.

Gargarif. in ♋, ♈, ♑, in a ☌, ✶, △, or ☿ ☍ ☽

Take

Take { Preparatiues the ☽ in ♊, ♎, or ♒. with a ☌ *, or △, inter ♃ ☿ ♀.
Glisters the ☽ in ♒ ♎, or ♍, with a ☌, *, or △, inter ☿, ♀, and the Moone.

Stop Humors, Flures, & Rheums, the ☽ in ♉, ♍ or ♑, with a ☌ *, or △, inter ♄, ☿, or ♀.

Obserue, that medicines are better to be giuen in the decreasc or wane of the Moone, then in the increase or spring, Præsertim si sine malis radijs.

Comfort the vertue { Attractiue, when the ☽ is in ♈, ♌, or ♐, in ☌, *, or △, betweene ☌ ☉, or ♃.
Retentiue, the ☽ being in ♉, ♍, or ♑, with a ☌, *, or △, betweene ♄ ☿ or ♀.
Digestiue, the ☽ in ♊, ♎, or ♒, with a ☌, *, or △, inter ☿ * ♀.
Expultiue, the ☽ in ♋, ♍ or ♐, in a ☌, *, or △, between ☽ & ☿ or ♀

To enter into Bathes for hot diseases, let the ☽ be in ♍, ♋, and ♐, for cold diseases, in ♈, ♌, or ♐: those haues in the which the ☽ goeth to the Coniunction of ♃, are very vnwholesome (saith the Astronomer) to take a Purgation in, but most fit to prouoke vomit, noted in my Almanacke thus ☌ ♃ ☽.

An Vnguent or Plaister is best applied, when the Moone is in that imaginary signe attributed to the member whereunto it is applyed.

And to conclude this point,

Si tibi deficiunt medici, medici tibi fiant,
Hæc tria, mẽs læta, requies, moderata diæta
Vse three Physitians skill, first Doctor Quiet,
Next Doctor Merriman, and Doctor Diet.

Times, or generall rules of Husbandry, and Gardening, superstitiously attributed to the Moone in the 12. signes of the Zodiaque.

He that obserueth the wind, shall not sow, and he that regardeth

regardeth the clouds, shall not reape: As thou knowest not which is the way of the Spirit, nor how the bones doe grow in the wombe of her that is with child: so thou knowest not the worke of God that worketh it. In the morning sow thy seede, and in the euening let not thine hand rest: for thou knowest not whether shall prosper, this or that, or whether both shall be a like good.

FIrst, before you plant or graft, &c. consider the winde, for if it be in the South or East, it is perilous: the premisses considered, plant and graft, the Moone encreasing in ♉, or ♒.

Good to sow or set all kind of corne and seeds, the Moone being extra impedimentum, in ♈, ♉, ♍, ♎, or ♑: if you sow in moyst ground, or the nature of the seed be moyst, the time is aptest after the full Moone, if it be dry, it is better in the increase: but the seedes whose rootes be round, must be sowne (as Onions & Cabbages, or Turneps, &c.) three or foure dayes before or after the full. Gather Apples and other fruits, hearbs, and flowers, to haue them in most beauty, & greatest vertue, the Moon at the full. Sow or set Garlicke, Lettice, Parsneps, Carrets, Pease and Beanes, two or three dates before or after the full moon. Sow seeds or hearbs for store, in the encrease from February vnto June. Good to fell Timber for building, in the wane of the Moone, for the auoyding of wormes, from Midsummer vntill January. Good to plash hedges, fell wood to burne, that the stocks may the better grow again, the Moon increasing, in ♈ or ♎. Cut vines in February or September, the Moone in ♈, ♎, or ♏.

Remoone trees in the same signes, all the last quarter, in November, September, or February.

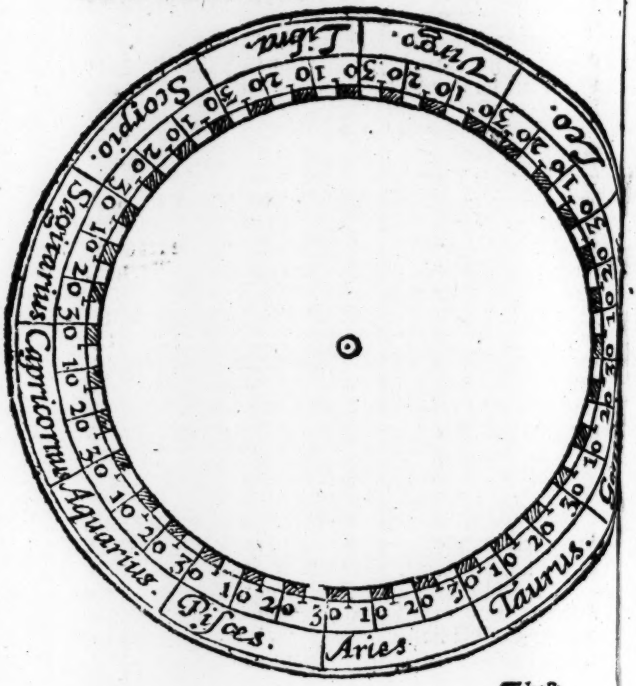
Dung your land that the weeds may not abound, in the last quarter. Sheare sheepe in the increase and in the same time cut your haire to grow the sooner.

Kill fat Swine at the full Moone, for the fat the better to endure the boyling. Good for ablactions or weaning of Children, about the full, the ☽ voyd of course, for them to forget the pap or nurse.

Good

Good to destroy Cornes, Haire, Wennes, Warts, and cut the Nailes, cut them in the last quarter of the Moone: and she in Comunction, Quartill, or Opposition with ♄ or ♂, noted in my Almanacke thus: ☌ ♄☽. □ ♄☽. ☍ ♄☽. ☌ ♂☽. □ ♂☽. ☍ ♂☽.

A Table composed according to the saying of Ptholomeus in the 60. Aphorisme of his Centiloquiums, wherein he saith the Physitian must behold the Moone as she passeth through the Criticall, Iudiciall dayes, at what time the Patient first felt his sickenesse, or the question first mooued for the sicke.



These

These are called Critticall dayes of the Physitians, when the Moone doth abide or rest in signes and degrees which be distãt either in a Quartil, or in an oppoſit Aſpect of the world, from the part of the Zodiaque in which she was in the beginning of the sickness (marked in my Almanacke thus, ☌, and thus, ☍,) Neuertheleſſe the Moone commeth to these beames or degrees, now more swift, now more slow: because of her swiftneſſe and slowneſſe in her Auge and oppoſite Auge (as I noted vnto you in my Prognoſtication Anno 1620.) Yea, and for these causes it may well seem to happen, and that not without reaſon, that the Criſes doe alter their times and are not the same day & houre alwayes, but doe differ in themselues. If the ☽ be in a Critticall day, id eſt, a day which giueth iudgment of sickneſſe, in her owne house which is Cancer, or her Exaltation, which is Taurus, or with Iupiter or Venus; She indicateth a good Criſis to come: if shee apply to Saturne, Mars, or the Dragons tayle, they say contrary: likewise if the Moone be in via combuſta, which is from the midſt of Libra vnto the midſt of Scorpio, or vnder the Sunne beames, and decreasing in light or motion, the Physitians say it threatneth death. These mutations whether they tend to bee better or worse, is decerned from the proper affection of that ſignificator whereby he is afflicted & troubled, and from the ſigne which the same poſſeſſeth, and from his conſiguration with other Planets, fortunate or vnfortunate. As if in the time of ones Criſis, the Moone bee found in a ſigne agreeable to her quality and condition, in reſpect of the nature of the matter, ſickneſſe, and action, shee sheweth the ſtrengthning and helpe of nature, and expelling of the ſickneſſe: so they affirme the alteration to be, euen as the ſignificator is well or euill affected, alſo the ſignification to be more or leſſe, and the force or efficacy of the ſickneſſe to bee ſtronger or weaker in ſtriuing with nature.

The vſe of this Table is thus: the day and houre knowne in which the ſicke perſon tooke his ſickneſſe, or the firſt queſtion made for the ſicke, you muſt ſearch

the

the ſigne and the degree, or rather the neereſt degree that the Moone is in, in my Almanacke, which being found according to the moneth & day, enter it into my precedent Table, where you ſhall finde the whole zodiaque diuided into 12. ſignes, and the ſignes againe into numbers of degrees, in the three vnmoueable columnes: then bring the Apex of the Index or volueli (running vpon the Center or middle of the Table with the Caracter of the ☽ vpon it:) and louing Reader thou haſt all thy deſire performed before thy face at one ſight.

Example.

THe 6. day of January, this preſent yeare 1622, ſuppoſe a certaine man fell ſicke at one of the clocke in the after noone (or then a queſtion being mooued for the ſicke) the Moone being then in the 21. degree 30. minutes of ♐, at that time, as you ſhall finde in the 4. columne of my Almanacke this yeare: now I deſire to know the Criticall and Judiciall dayes or the Criſis, (now you muſt note, that this Table doth repreſent a moneth of Peregration) that is, 27. dayes and 8. houres, which is euery Moone in the yeare. Then being Initium morbi, with the Caracter of the Moone, and Apex of the volueli, to the 21. degree ♐, in my precedent Table, and it ſheweth you before your eyes, holding therewith a little waxe at the 21. degree of ♐, in the inner columne of the Table, poynting you to the 21. degree of Taurus, to which whe the Moone comes, it is a Judiciall day, which is the 11. day of January after at high noone: So likewiſe, in thoſe dayes that the Moone commeth to the 21. degree of ♌, ♍, and ♎, are Judiciall dayes, which are the 18. 24. 31. dayes of January: but the 1. 2. 3. and 4. Criticall dayes (or Criſis) are, when the Moone commeth to the 21. degree of ♊, ♍, and ♐: which ſhall be the 13. day of January about eleuen a clocke at night, the 20. day neere 6 in the morning, the 2. of February, neere 8. at night, and ſo vnto the yeeres end if need bee. But remember this, that the will of God is to be looked at in this and all elſe.

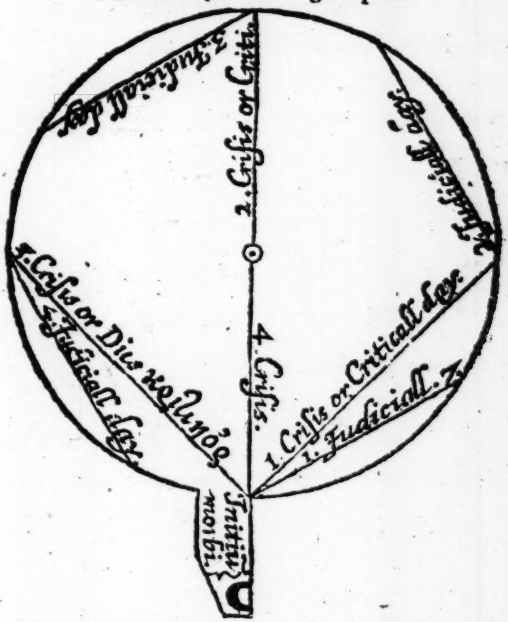
The

A Prognostication.

The Faires of the Towne of *Derby* this yeare.

April the 19 being fryday in Easter weeke. May the 3 & 4 date. Also June the 14 being fryday in Whitsun weeke, the 21 & 22 of the same June, being thursday & fryday before Midsummer Day. July on the 25 being S. Iames Day. September 26 being fryday next before Michaelmas Day.

Thus ended is this little Booke,
Rude and base for want of skill,
Although it bee not as it might,
Yet thou seest here what's my good will,
Which if thou please for to accept,
And take my labour in good part:



Place this figure vpon the Table going before with a needle and thread.

Then be thou sure that I haue,
Which I desire with my heart.
And now will I good reader deere,
Commit thee to the God of might,
Who giue vs grace that thou and I,
May liue according to his Light.

Trini-vni Deo gloria,
God saue our gracious King Iames.

FINIS.

For the falling ebill.

Take 2 good handfulls of the leaves of
Piony shredd them smale, & in
winter take the roote shredd smale
and steepe them in a quart of white
wyne, straine it & drinke hauls
a pynt at a time, adding to eidy
draught as you take it the quantitie
of a raze of ginger smallie pounded
probatum, by Dock.
